Description
These SMA Female to pre-trimmed cables assemblies are designed to be used as convenient test probes. The pre-trimmed end of the cable assembly has an exposed center conductor and dielectric and is ready for use. A common Research and development application is to solder the trimmed end of the cable to an exposed microstrip trace to inject a signal or to measure a signal of interest. Each cable assembly is individually packaged in a reusable protective tube. These test probes have been 100% RF tested as a two ended assembly prior to trimming in order to verify the assemblies perform to 6 GHz with a maximum VSWR of 1.35:1. Flush Cutt Test Probes are also available.
