Description

The PE8321 is a high power single junction isolator offering a forward power rating of 150 Watts CW and reverse power rating of 100 Watts CW over an operational frequency band of 135 to 175 MHz. This coaxial isolator uses SMA female connectors on all ports and has a minimum of 20 dB isolation.

Pasternack offers a wide variety of isolators to fit your needs. These are two-port devices that transmit microwave or radio frequency power in one direction only and block the signal in the opposite direction. They can be thought of as a diode for RF energy. Isolators are used to isolate equipment from the effects of conditions outside of the equipment. For instance they are used to prevent a microwave source being detuned by a mismatched load. Pasternack's isolators feature excellent insertion loss, high isolation and reliability.
