Dual Junction Circulator With 36 dB Isolation From 4 GHz to 8 GHz, 10 Watts And SMA Female

Features
• Dual-Junction Circulator
• Frequency Range of 4 to 8 GHz
• Female SMA Connectors
• Low VSWR
• Forward and Reverse Power of 10 watts

Applications
• Radar Systems
• Military
• Wireless Radio Systems
• Telecom Infrastructure
• Communication Systems
• R&D Labs
• Microwave Radio Systems

Description
The PE83CR1019 is a dual junction circulator offering 36 dB minimum isolation over a frequency band of 4 to 8 GHz. This coaxial part uses SMA female connectors on all ports and has a power rating of 10 watts in the forward and reverse direction.

Pasternack offers a wide variety of circulators to fit your needs. These unique devices enable two signals to use a single channel. The classic use of a circulator (a three port device) is for the line/coax between the antenna and a transceiver, allowing the signal to come from the antenna to the receiver while the transmit signal goes from the transmitter to the antenna. As a dual junction device, this is essentially two circulators in one package and has four ports. This allows for roughly twice the isolation of a standard circulator. By terminating one of the four ports (using a 50 ohm load), it becomes a three port device and can be connected as a standard circulator. An isolator can be created by terminating another port, creating a two port device. These devices can be used in antenna transmitting and receiving, radar, amplifier systems and anything that requires isolation from a signal reflection and the ability to send signals in opposite directions down a single channel. These circulators feature excellent insertion loss, high isolation and reliability.
