Description

PEWGCOV159-20 is a radome cover for PEWAN159-20 20 dBi WR-159 Standard Gain Horn antenna. This waveguide antenna radome cover is made from high strength, thermally stable Polymethacrylimide (PMI). PMI offers a low Relative Permittivity (Dielectric Constant) at the high frequency ranges seen with microwave and millimeter wave components. This allows for minimal signal loss or attenuation over other materials.

Increase your system capabilities with our PMI radome covers, designed to enhance the durability and longevity of standard gain horn antennas. Shielding against environmental elements, our radome covers ensure consistent signal integrity in any conditions. PEWGCOV159-20 has internal dimensions of 7.95 in by 5.9 in and will fit 20 dBi WR-159 standard gain horns. Pasternack offers a wide selection of high performance waveguide components available in stock and same-day shipping to customers worldwide.
